PROFESSIONAL SUMMARY

Full Stack Developer specializing in backend systems, REST API integrations, and AI-driven applications. Experienced in building production-oriented web and mobile platforms with real-time data processing and scalable backend architectures. Strong design sensibility ensuring polished, professional UI delivery.

TECHNICAL STACK

- Languages: JavaScript, Ruby, C, C++, Dart
- Backend: Node.js, Express.js, Ruby on Rails
- Frontend: React, Flutter
- AI Integration: YOLOv8, Model Inference APIs
- Systems: Linux, Git, REST API Architecture
- Concepts: MVC, Async Processing, Auth Systems
- Tools: CI/CD (basic), API Testing, OOP

SYSTEMS & BACKEND EXPERIENCE

- Designed REST API architectures supporting authentication, CRUD operations, and real-time data workflows across production freelance projects.
- Integrated third-party APIs and asynchronous backend processes to support scalable application functionality.
- Built full-stack systems from frontend UI integration to backend services and structured API layers.
- Implemented secure data handling workflows and structured backend architectures for production-ready applications.

PROJECT EXPERIENCE

AI Artifact Recognition Platform – PEC Hackathon

- Built AI-powered recognition platform integrating YOLOv8 inference pipelines with Flask backend services and React dashboard.
- Designed REST APIs for real-time image processing and scalable model serving workflows.

Community Connect – OSM Hackathon

- Developed full-stack event platform using Express.js backend and Flutter mobile frontend.
- Designed RESTful APIs and real-time GPS attendance validation pipelines.

Garva Diary – BMC InnovateX

- Engineered backend APIs using Ruby on Rails with MVC architecture.
- Implemented structured validation workflows and scalable mobile integrations.

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer (Contract-Based)

Remote

- Developed and deployed production-ready full-stack platforms with structured REST API backends and polished UI delivery.
- Designed scalable backend architectures handling authentication, real-time data workflows, and third-party integrations.
- Selected Live Projects:
 - Jyotism - <https://jyotism.com>
Built backend services with REST API architecture, authentication workflows, and structured data management pipelines.
 - Mahadaan - <https://mahadaan.com>
Developed backend systems supporting real-time user interactions, secure data handling, and scalable API endpoints.

Mentor – Call for Enthusiast Program (i-CES)

- Guided students in building structured applications with scalable backend architecture and clean development workflows.

EDUCATION

Institute of Engineering, Tribhuvan University

Bachelor's in Computer Engineering

Pashchimanchal Campus, Pokhara

Expected Graduation: 2083 B.S.

2021 – Present
